

PICSY PRESS WORK OF METALL, INNOVATIVE CONVEYOR SYSTEM

Transportation of
scrap or produced parts

Use the movement of the die to transport scrap or produced parts.

PICSY is an energy saving solution for the initial transportation of scrap or produced parts.

The vertical movement of each stroke is converted into a horizontal shaking movement. Punched parts are leaded.

The advantages compared to conveyor belt and air blow:

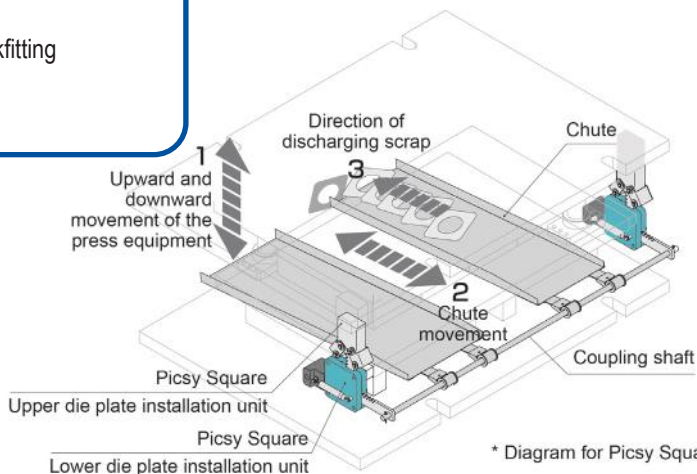

- Easy mechanism and small sizes
- Used in combinations of two or more
- No scattering of oil due to air blow
- Controlled transportation
- Easy installation - also for backfitting
- No additional energy costs
- Low maintenance needed
